MARTY MURRAY

WASTE MANAGEMENT FACILITY

NRCS TAKES SAFETY VERY SERIOUSLY, HOWEVER, THE SAFETY COMMITMENT AND THE JOB SITE PRACTICES OF THE CONTRACTOR ARE BEYOND CONTROL OF NRCS. IT IS STRONGLY RECOMMENDED THAT SAFE WORKING CONDITIONS AND ACCIDENT PREVENTION PRACTICES BE THE TOP PRIORITY OF ANY JOB SITE. LOCAL, STATE, AND FEDERAL SAFETY AND HEALTH STANDARDS SHOULD ALWAYS BE FOLLOWED TO HELP INSURE WORKER SAFETY. MAKE CERTAIN ALL EMPLOYEES KNOW THE SAFEST AND MOST PRODUCTIVE WAY OF CONSTRUCTING THE DESIGNED PRACTICES. EMERGENCY PROCEDURES SHOULD BE KNOWN BY ALL EMPLOYEES. DAILY MEETINGS HIGHLIGHTING SAFETY PROCEDURES ARE ALSO RECOMMENDED. IT IS THE CONTRACTORS RESPONSIBILITY TO ENSURE A SAFE WORK ENVIRONMENT FOR THEIR EMPLOYEES.

THE HUA/MANURE STORAGE FACILITY IS NOT TO BE PUT INTO USE UNTIL A FINAL INSPECTION HAS BEEN CONDUCTED BY THE DESIGN ENGINEER. IF PUNCH LIST ITEMS ARE FOUND DURING THE INSPECTION THE ITEMS (IF ANY) ARE TO BE ADDRESSED/CORRECTED BY THE APPROPRIATE CONTRACTOR ACCORDING TO A PLAN PREPARED BY THE DESIGN ENGINEER. ONCE ALL ITEMS ARE CERTIFIED THE FACILITY CAN BE PUT INTO USE.

PROJECT LOCATION:
1904 WEST 8TH STREET
WYOMING, PA 18644

AS-BUILT/ DESIGN INFORMATION

QUALITY ASSURANCE STATEMENT				ENGINEER STATEMENT	
To the best of my knowledge, I certify that the practices have been installed as per the attached drawings and specifications, based on the information provided to me and/or observations I have made.				In my professional opinion, I certify that the practices have been installed as per the attached drawings and specifications, based on the information provided to me and/or observations I have made.	
Practice	Description	As-Built Quantity (By Inspector)	Inspector (Initials)	Certification (Engineer/JAA Signature)	Date Certified
342	CRITICAL AREA PLANTING				
313	MANURE STORAGE				
561	HEAVY USE AREA				
620	UNDERGROUND OUTLET				
558	ROOF RUNOFF				
367	ROOF				
382	FENCE				
575	TRAILS AND WALKWAY				
351	WELL DECOMMISSIONING				
500	OBSTRUCTION REMOVAL				
606	PERIMETER DRAIN				

GENERAL NOTES

1. FAILURE TO CONSTRUCT THIS FACILITY IN ACCORDANCE WITH THE NRCS DESIGN OR AUTHORIZED MODIFICATIONS WILL RESULT IN WITHDRAWAL OF NRCS TECHNICAL AND FINANCIAL ASSISTANCE.
2. ALL FEDERAL, STATE, AND LOCAL LAWS, RULES, AND REGULATIONS GOVERNING THE CONSTRUCTION OF THIS FACILITY SHALL BE STRICTLY FOLLOWED. THE OWNER OR OPERATOR IS RESPONSIBLE FOR OBTAINING ALL CONSTRUCTION PERMITS.
3. IT IS THE RESPONSIBILITY OF THE EXCAVATING CONTRACTOR TO COMPLY WITH PA ACT 187 (1996) AND ALL ITS REVISIONS BEFORE PERFORMING ANY EXCAVATION. THE PA ONE-CALL PHONE NUMBER IS 1-(800)-242-1776. THE SERIAL NUMBER FOR DESIGN IS 20191611939 DATED 6/10/2019.
4. A MEETING BETWEEN THE LANDOWNER, CONTRACTOR, AND NRCS REPRESENTATIVE SHALL BE REQUIRED PRIOR TO ANY EXCAVATION OR CONSTRUCTION WORK.
5. A COPY OF THE NRCS SPECIFICATIONS AND DRAWINGS SHALL BE ONSITE DURING ALL PHASES OF CONSTRUCTION. A COPY OF THE DRAWINGS SHALL BE PROVIDED TO THE TRUSS MANUFACTURER.
6. OSHA REGULATIONS SHALL BE FOLLOWED AT ALL TIMES.
7. THE CONTRACTOR IS RESPONSIBLE FOR IMPLEMENTING ALL MEASURES NECESSARY TO PROTECT WORK IN PROGRESS FROM ENVIRONMENTAL CONDITIONS SUCH AS TEMPERATURE EXTREMES, SURFACE, AND GROUND WATER.
8. THE CONTRACTOR IS RESPONSIBLE FOR VERIFYING ACTUAL FIELD MEASUREMENTS SHOWN ON THE PLANS.
9. IN THE EVENT ROCK, UNSTABLE SOILS, OR SEEPS ARE ENCOUNTERED DURING EXCAVATION, WORK SHALL BE STOPPED AND THE NRCS SHALL DETERMINE HOW TO PROCEED.
10. THE CONTRACTOR IS RESPONSIBLE FOR THE SECURITY OF THE JOB SITE UNTIL THE WORK HAS BEEN CERTIFIED BY THE NRCS.
11. CERTIFICATION OF CONFORMANCE SHALL CERTIFY THAT ALL WORK WAS PERFORMED TO THE NRCS SPECIFICATIONS.

CONSTRUCTION NOTES

1. CLEAR AND GRUB THE ENTIRE AREA WITHIN THE WORK LIMITS.
2. ALL FILL MATERIAL MUST NOT CONTAIN FROZEN MATERIAL, SOD, ROOTS, OR OTHER PERISHABLE MATERIAL, OR ROCK LARGER THAN EIGHT INCHES IN DIAMETER.
3. SIX INCHES TOPSOIL WILL BE INCORPORATED INTO THE EARTHFILL TO MEET THE NEAT LINES SHOWN ON THE TYPICAL SECTION.
4. ALL AREAS TOP-DRESSED WITH TOPSOIL AND DISTURBED DURING CONSTRUCTION WILL BE SEEDED ACCORDING TO NRCS CRITICAL AREA PLANTING SPECIFICATION.

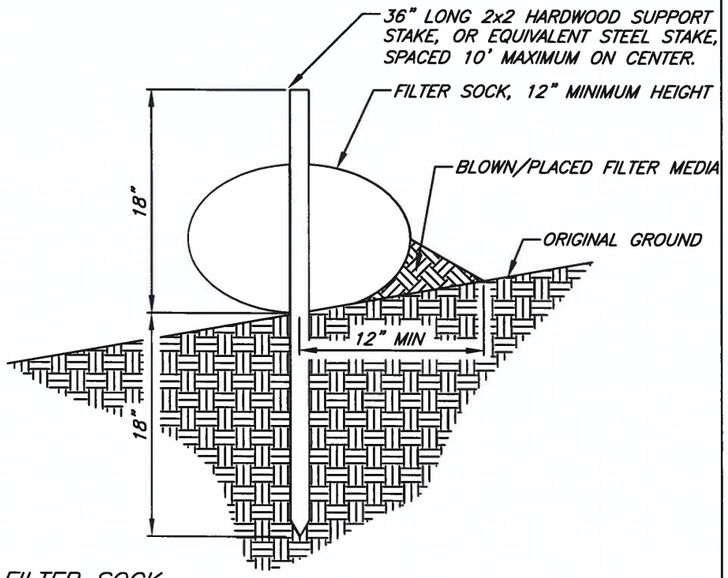
SHEET 1 OF 34

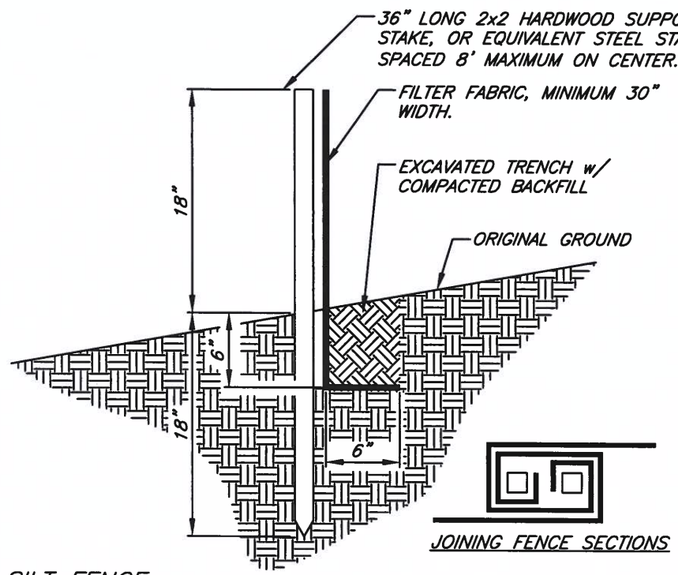
E&S POLLUTION CONTROL PLAN AND FINAL SEEDING RECOMMENDATIONS



FILTER SOCK

NOTES:

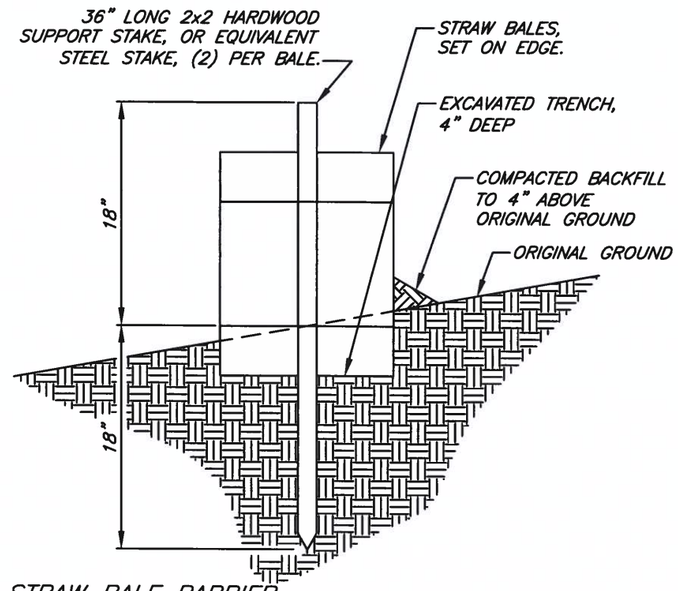
1. FILTER SOCK SHALL BE INSTALLED DOWN SLOPE OF THE DISTURBED AREAS OF THE CONSTRUCTION SITE.
2. TRAFFIC SHALL NOT BE PERMITTED TO CROSS FILTER SOCKS.
3. FILTER SOCK SHALL BE PLACED AT LEVEL EXISTING GRADE. BOTH ENDS OF THE SOCK SHALL BE EXTENDED AT LEAST 8' UP SLOPE AT 45 DEGREES TO THE MAIN FENCE ALIGNMENT.
4. STAKES MAY BE INSTALLED IMMEDIATELY DOWN SLOPE OF THE SOCK IF SO SPECIFIED BY THE MANUFACTURER.
5. ACCUMULATED SEDIMENT SHALL BE REMOVED WHEN IT REACHES HALF THE ABOVE GROUND HEIGHT OF THE SOCK.
6. SOCKS SHALL BE INSPECTED WEEKLY AND AFTER EACH RUNOFF EVENT. DAMAGED SOCKS SHALL BE REPAIRED ACCORDING TO THE MANUFACTURER'S SPECIFICATIONS OR REPLACED WITHIN 24 HOURS OF INSPECTION.
7. BIODEGRADABLE FILTER SOCKS SHALL BE REPLACED AFTER 6 MONTHS; PHOTODEGRADABLE SOCKS AFTER 1 YEAR. POLYPROPYLENE SOCKS SHALL BE REPLACED ACCORDING TO THE MANUFACTURER'S RECOMMENDATIONS.
8. UPON STABILIZATION OF THE AREA TRIBUTARY TO THE SOCK, STAKES SHALL BE REMOVED. THE SOCK MAY BE LEFT IN PLACE AND VEGETATED OR REMOVED. IN THE LATTER CASE, THE MESH SHALL BE CUT OPEN AND THE MULCH SPREAD AS A SOIL SUPPLEMENT.
9. ANY SECTION OF SILT FENCE WHICH HAS BEEN UNDERMINED OR TOPPED SHALL BE IMMEDIATELY REPLACED WITH A ROCK FILTER OUTLET.



SILT FENCE

NOTES:

1. SILT FENCE SHALL BE INSTALLED DOWN SLOPE OF THE DISTURBED AREAS OF THE CONSTRUCTION SITE.
2. SILT FENCE SHALL BE PLACED AT LEVEL EXISTING GRADE. BOTH ENDS OF THE FENCE SHALL BE EXTENDED AT LEAST 8' UP SLOPE AT 45 DEGREES TO THE MAIN FENCE ALIGNMENT.
3. FENCE SHALL BE INSPECTED WEEKLY AND AFTER EACH RUNOFF EVENT. DAMAGED FENCE SHALL BE REPAIRED ACCORDING TO THE MANUFACTURER'S SPECIFICATIONS AND REPLACED WITHIN 24 HOURS OF INSPECTION.
4. SEDIMENT SHALL BE REMOVED WHEN ACCUMULATIONS REACH HALF THE ABOVE GROUND HEIGHT OF THE FENCE.
5. ANY SECTION OF SILT FENCE WHICH HAS BEEN UNDERMINED OR TOPPED SHALL BE IMMEDIATELY REPLACED WITH A ROCK FILTER OUTLET.
6. FENCE SHALL BE REMOVED AND PROPERLY DISPOSED OF WHEN TRIBUTARY AREA IS PERMANENTLY STABILIZED.



STRAW BALE BARRIER

NOTES:

1. STRAW BALES SHALL BE INSTALLED ACROSS SWALES, WATERWAYS, AND DIVERSIONS WHERE SEDIMENT LADEN RUNOFF COULD LEAVE THE CONSTRUCTION SITE.
2. STRAW BALE BARRIERS SHALL NOT BE USED FOR PROJECTS EXTENDING MORE THAN 3 MONTHS.
3. STRAW BALE BARRIERS SHALL BE PLACED AT EXISTING LEVEL GRADE WITH ENDS TIGHTLY ABUTTING THE ADJACENT BALES. THE FIRST STAKE OF EACH BALE SHALL BE ANGLED TOWARD THE ADJACENT BALE TO DRAW THE BALES TOGETHER. STAKES SHALL BE DRIVEN FLUSH WITH THE TOP OF THE BALE. BOTH ENDS OF THE BARRIER SHALL BE EXTENDED AT LEAST 8' UP SLOPE AT 45 DEGREES TO THE MAIN BARRIER ALIGNMENT.
4. SEDIMENT SHALL BE REMOVED WHEN ACCUMULATIONS REACH ONE THIRD THE ABOVE GROUND HEIGHT OF THE BALE. DAMAGED OR DETERIORATED BALES SHALL BE REPLACED IMMEDIATELY UPON INSPECTION.
5. ANY SECTION OF THE STRAW BALE BARRIER WHICH HAS BEEN UNDERMINED OR TOPPED SHALL BE IMMEDIATELY REPLACES WITH A ROCK FILTER OUTLET.
6. BALES SHALL BE REMOVED WHEN THE TRIBUTARY AREA HAS BEEN PERMANENTLY STABILIZED.

THIS EROSION AND SEDIMENTATION PLAN IS BASED ON THE PENNSYLVANIA DEPARTMENT OF ENVIRONMENTAL PROTECTION EROSION AND SEDIMENT POLLUTION CONTROL PROGRAM MANUAL, TECHNICAL GUIDANCE NUMBER 363-2134-008, MARCH 2012.

1. When grading is finished, apply lime and fertilizer in accordance with soil test recommendations.
2. If soil test results are not available, apply 4 ton per acre of agricultural grade limestone and fertilize at the rate of 1,000 lbs. Of 10-20-20 or equivalent per acre.
3. Lime and one-half (1/2) the amount of the fertilizer shall be incorporated 4 to 6 inches into the soil.
4. Work area with chisel plow or similar type equipment, making sure lime and fertilizer are worked well into the soil.
5. Follow with the balance of fertilizer and seed.

Seeding Recommendation

6. The seed mixture shall be the following or similar if approved by the NRCS representative.

Nurse Crop (required with every permanent seed application):

Oats	64	lbs/acre PLS
Wheat	90	lbs/acre PLS
Annual Rye	40	lbs/acre PLS

Permanent Stabilization:

Perennial Rye	40	lbs/acre PLS
PLUS		
Tall Fescue	80	lbs/acre PLS

NOTE: This mixture is suitable for frequent mowing. Do not cut shorter than 4".

PLS means pure, live, seed. PLS is the product of the percentage of pure seed times percentage germination divided by 100. For example, to secure the actual planting rate for switchgrass, divide 12 lbs PLS by the PLS percentage shown on the seed tag. Thus, if the PLS content of a given seed lot is 35%, divide by .35 to obtain 34.4 lbs of seed, the amount of seed required to plant 1 acre.

If partial completion of any part of the project is accomplished, and this area will be disturbed again BUT not for a period of 20 days or more, those areas must be seeded with a TEMPORARY cover-seeding.

Temporary Seed and mulch will be applied at the following fates:

Annual Ryegrass	40 lbs/Acre
Winter Rye	3 Bu/Acre
Winter Wheat	3 Bu/Acre
Spring Oats	3 Bu/Acre

Planting Recommendation

Seed can be applied with a drill or broadcast seeder.
Band seeding is not permitted.
If broadcast, harrow or disk lightly to cover seed. Roll with cultipacker or similar roller in same direction as seeding. (Double drilling gives better distribution of seeding and helps to spread the water while plants are small. Drill first lengthwise and then crosswise (in a zig-zag pattern). Optimum planting time is early spring or mid summer.

7. As soon as seeding is finished, mulch with 3 Tons/Acre of hay or straw, making a layer 1 to 1.5 inches deep. Set disk straight and go over mulch to press straw into the soil.
Tackifiers can also be used for anchoring mulch.

General Site Permitting Information

1) Proposed area of disturbance is less than 1 Ac.
(Includes excavation, spoil pile, footer drain, etc...)

2) Name of Receiving Water Body: NONE_____
Stream Classification: NONE___
Distance from Work Area to stream: GREATER THAN 1000FT

3) Are there any apparent wet lands within the project work area and/or receiving runoff from the area of disturbance? NO

4) Soil type(s) in area of disturbance:
Mardin channery silt loam.

Additional Notes:

Area of disturbance is 34,000 sq.ft.

SHEET 3 OF 34

OWNER RESPONSIBILITIES

ACCESS

1. The owner is responsible for ensuring that all livestock are removed from the work site and that livestock will remain excluded from the work site until the project has received final certification and is approved for use.
2. The owner is to provide reasonable access to the work site.

EXCAVATION NOTES

GENERAL

3. No excavation shall begin until the excavator has complied with all PA One-Call requirements and any utility company responses.
4. All erosion and sedimentation practices shall be installed prior to beginning excavation.
5. OSHA standards shall be followed for all excavation.
6. Topsoil shall be stripped and stockpiled to be re-distributed when the project is complete.
7. All manure-laden soil shall be removed and spread according to the landowner's nutrient management plan.
8. The site shall be excavated until, good, stable soil is encountered.
9. If seeps are encountered in the excavation, provide clean 2B-stone backfill up to the seep elevation.
10. When hard material is encountered, over-excavate design sub-grade by 1.0' and replace with a compacted impermeable layer (i.e. CL/ML) before installing bedding stone; consult with design engineer before doing so.
11. If rock-refusal is met before the design sub-grade, changes in design elevations will require NRCS approval.
12. Excess material shall be disposed of as directed by the landowner and the NRCS inspector.
13. A uniform layer of 2B-stone (AASHTO #57), 3" thick shall be placed above subgrade to bed ALL concrete. Stone depth to be measured after compaction. Stone shall not be placed until earthen subgrade elevation and compaction is approved by NRCS inspector.
14. The contractor is responsible for protecting the construction site until the work has been completed and certified by the design engineer. This includes; dewatering the site as necessary as well as preventing upslope runoff from entering the work area. It is strongly recommended that all planned diversions or swales be installed first and all perimeter drain outlets be installed before stone or concrete is placed, if possible.
15. Final grading shall provide positive drainage away from all structures. Swales shall be shaped as necessary along the heavy use area and manure storage to direct stormwater away from the structures.

EARTHFILL

16. Earthen backfill shall be placed in a manner that prevents damage to the structures and allows the structures to assume the loads from the earth backfill gradually and uniformly. The height of the earth backfill adjacent to the structure shall be increased at the same rate on all sides of the structure.
17. Backfill shall be placed in even, horizontal layers. If necessary, over-excavate to an approximately level surface and build subgrade in evenly compacted, horizontal lifts of specified thickness.
18. Backfill shall be placed at optimum moisture content. Backfilled material shall have enough moisture so that when formed into a ball, it will not break if struck sharply with a pencil. Backfilling newly poured walls may not begin until 14-days after the final concrete placement. Compact using the following equipment and lift thickness:

    FOOTINGS AND STRUCTURE FLOOR:

    -(3) passes of sheepsfoot or vibratory roller in 6-inch lifts

    WITHIN 3 FEET OF WALLS:

    -(3) passes by hand compactor or small, manually directed plate vibrator in 6-inch lifts

    BEYOND 3-FEET OF WALLS:

    -(3) passes by track equipment (> 4,000 lbs) in 6-inch lifts
    -(4) passes by rubber tired equipment in 6-inch lifts
    -(3) passes vibratory roller in 6-inch lifts
19. Avoid backfill containing rocks or clods greater than 3" diameter, debris, roots, frozen soil, or other unsuitable material as determined by the NRCS inspector.

PIPES

20. All pipes shall meet minimum material specifications:
    - 20.1. SCH 40 PVC shall meet ASTM-D1785
    - 20.2. SDR-35 shall meet ASTM-D3034
    - 20.3. Corrugated polyethylene tubing shall meet ASTM-F405
21. All fittings shall be pressure-rated, watertight and meet minimum material specifications of pipe.
22. Pipes shall be installed to specified depth and to minimum design grade.
23. Trenches for pipelines shall be free of rocks and sharp-edged materials. A supply of AASHTO #57 bedding, or other suitable granular material, shall be available to bed pipelines in unstable soils or as directed by NRCS inspectors.
24. Pipes shall be backfilled as shown on design details. Any pipe to be placed in a traffic area is to be bedded as per design details and backfilled to the surface with 2A modified or 2RC aggregate. Any pipe not specifically detailed may be backfilled with moist earth, free of large clods or rocks, and hand compacted in 6-inch lifts. DO NOT drive machinery over recently backfilled pipes. Mound backfill 10% of trench depth to allow for settlement.

GENERAL CONSTRUCTION NOTES
MARTY MURRAY
LUZERNE COUNTY, PENNSYLVANIA

United States Department of Agriculture
USDA
Natural Resources Conservation Service

File No.

Drawing No.

Sheet 4 of 34

CONCRETE CONSTRUCTION NOTES

REINFORCEMENT

1. Reinforcing steel is to be Grade 60. Where 6"x6" w2.9xw2.9 (6 gage) is specified; the fabric shall be mats not rolls and supported on steel chairs. NO CINDER OR CONCRETE BRICKS ARE PERMITTED. Support shall be often enough so reinforcement stays at the required location within the slab or footing. A 5' chair spacing is a good starting point.
2. Form oil shall not be sprayed on any rebar, waterstop, or concrete.

CONCRETE

3. 4,000 psi 28-day compressive strength
4. MAXIMUM water-cement ratio 0.50
5. Air-content 5 to 7%, with air-entrainment
6. Max concrete temperature is 95°
7. Slump shall be 2 to 4 inches prior to addition of super-plasticizing admixtures being added, 3 to 6 inches without use of super-plasticizers.
8. Slump can be 7.5 inches MAX with super plasticizing admixtures added.
9. Concrete admixtures shall meet ASTM-C260 for air entrainment, and ASTM C494 type A, D, F or G for water-reduction and set-retardation and Types C or E for non-corrosive accelerators.
10. Admixtures shall be included in the design mix. Follow dosages and recommendations of manufacturer.
11. The contractor(s) shall provide a design mix to the NRCS for approval prior to ordering concrete. All load tickets shall be provided to and approved by the inspector on site and shall reflect all materials and quantities including admixtures, amount of water (metered water and free moisture in the aggregate), and total size of the batch. The batch ticket must indicate the amount of water than may be added on-site while maintaining the design requirements or no water may be added.
12. Concrete for curbs or walls shall not contain any SLAG in the mix.

PLACEMENT

13. Concrete shall only be placed in the presence of an NRCS inspector.
14. Placement during hot or cold weather will require a written plan in advance detailing concrete conditions, placement provisions, and a curing plan.
15. Concrete shall not be placed until the sub-grade, forms, and steel reinforcements have been inspected and approved by the NRCS. Notification shall be given far enough in advance to provide time for inspection.
16. No water in excess of the amount called for by the job design mix shall be added to the concrete. No water may be added after a superplasticizer.
17. Concrete shall be conveyed from the mixer to the forms as rapidly as practical by methods that will prevent segregation of the aggregates or loss of mortar. Concrete shall be placed within 1-1/2 hours after the introduction of cement to the aggregate unless an approved set-retarding admixture in used in the mix; during periods of hot weather, it may be necessary to reduce this time.
18. Concrete shall not be dropped more than 5 feet vertically. Superplasticized concrete shall not be dropped more than 12 feet vertically.
19. Formed walls shall be placed in 2' layers unless superplasticizer is used, in which case the maximum layer shall be 5'. Each layer shall be consolidated to ensure a good bond with the preceding layer.
20. Concrete shall be consolidated by vibrating immediately after placement and extend a minimum of 6" into the previously consolidated layer.
21. Concrete shall be worked into corners and angles and around all reinforcement and embedded items in a manner that prevents segregation or the formation of "honeycombing".
22. Vibration shall not be used to make concrete flow.
23. If the surface of a previously placed layer of concrete has taken a set to the degree that it will not mix with the preceding layer when vibrated, the contractor shall discontinue placing concrete and form a construction joint to avoid a "cold joint". Vinyl waterstop and form material shall be on site prior to starting the placement of any concrete.
24. The landowner has the option of having grooves floated or cut into the structure floor(s) for added traction for animals and equipment. This decision will be conveyed to the contractor(s) during price solicitation.

CURING

25. Concrete shall be allowed to cure at least 24 hours prior to beginning form or reinforcement placement for adjacent construction.
26. Heavy loads; skid loaders, pallets of forms, etc. shall remain off of concrete slabs or floors for a minimum of 3 days.
27. Forms for walls shall not be removed for at least 24 hours after placing the concrete. If forms are removed in less than 7 days, the exposed concrete shall be sprayed with curing compound.
28. Curing compound shall be applied in a uniform layer over all surfaces requiring protection at a rate as designated by the manufacturer. Curing compound shall be reapplied if disturbed within 3 hours after being applied.
29. All wall ties, honey-combing and air holes >3/4" shall be parged with non-shrink grout.
30. Random cracking in the walls and floor shall be evaluated and determined if the concrete needs removed or repaired. Removal and repair shall be the responsibility of the contractor at no increase in cost.
31. If major repairs are required, the contractor shall prepare a written repair plan with all materials and methods clearly stated and shall be approved by the NRCS engineer of authority before proceeding with the repair

JOINTS

32. Before new concrete is placed on or against concrete that has set, the surface of construction joints shall be cleaned of all laitance and debris by high-pressure water cutting, washing and wire-brushing, or as approved by engineer. The surface of the in place concrete shall be cut to expose clean, sound aggregate, but not so deep to undercut the edges of the large aggregate. All construction joints shall be wetted for at least 1-hour prior to new placement and standing water removed.
33. Slab control joints shall be saw-cut as soon as possible but no Later than 24 hours after placement of the concrete, at the intervals indicated on the drawings. All joints shall be water tight and as shown on the detail drawings. The saw-cuts shall be thoroughly cleaned and dried so the sealant and primer will bond to the concrete.
34. For the joints in the drawings that call for an elastomeric sealant, the sealant shall meet the requirements stated in the Construction Specification, included in this design package, and shall also meet the following; The sealant shall be Type S (Single Component), Class 25, and meet the requirement for Type I (Able to be immersed in liquid). Some sealants require a primer be used before the sealant is installed; primers shall be used no matter if the joint is located in a "submerged" condition or not. It is recommended that the primer be supplied by the same manufacturer as the sealant, this will ensure that the sealant and primer are compatable.

TESTING REQUIREMENTS

35. The contractor is responsible for obtaining a 3rd party ACI Certified Technician for field testing of concrete. The concrete plant can not test their own concrete. Slump, air entrainment, and concrete temperature shall be taken to ensure the concrete meets the NRCS requirements.
    (4) concrete test cylinders shall be taken every 50 cu.yds.
    (3) cylinders to be broke at 28 days and (1) cylinder shall be saved for a 56 day break if necessary; this shall be done for every 50 cu.yds sampled.
    Slump, air entrainment, and concrete temperature shall be recorded every 50 cu.yds as well.
    All concrete for testing or making cylinders shall be taken from the discharge end of the pump truck.
    All test results shall be provided to the inspector. The ACI technician shall be present from start of concrete placement until the last concrete truck leaves the site.
36. The contractor is responsible for ensuring that the concrete meets the design requirements. The contractor shall test the concrete as needed; slump, air entrainment, concrete temperature, and cylinders. All concrete for testing or making cylinders shall be taken from the discharge end of the pump truck. The NRCS, PACD, or Conservation District inspector may test the concrete as they feel the need to do so. The contractor is not to rely on the inspector to provide the testing service.

CONCRETE CONSTRUCTION NOTES
MARTY MURRAY
LUZERNE COUNTY, PENNSYLVANIA

United States Department of Agriculture
Natural Resources Conservation Service

File No.
Drawing No.
Sheet 5 of 34

Roof Structure Design & Construction Notes

1. Trusses shall be used for this roof. Shop drawings shall be provided to the NRCS design engineer for approval prior to ordering the trusses and "PE" (Professional Engineer) sealed shop drawings shall be supplied by the Truss Plate Institute certified manufacturer at the time of truss delivery. (Truss and stringer configuration shown in the drawings is for illustration purposes only) NRCS does not design roof trusses.

   * Make the truss designer aware of knee bracing being used.
   * Make the truss designer aware trusses shall be designed for partially enclosed bldg.
   * Make the truss designer aware trusses shall be design for Category II importance factor.

2. All nails used for structural connections shall be ring, spiral, or screw shank hardened nails full head size 16d or larger.

3. All nails and bolts used with pressure treated wood shall be hot-dip galvanized nails that meet the minimum galvanized coating requirements for the most restrictive wood preservative treatment method. (i.e. CCA treated wood requires a minimum coating rating of G-90 however ACQ treated wood requires a coating rating of G-185. When the wood types are mixed, use the G-185 connectors. Consult with individual fastener, hardware manufacturer for recommendations)

   CAUTION: New wood preservative treatment methods require special fasteners and connectors. All plates and fasteners used with ACQ, CBA or CA treatment formulas must conform to ASTM standards ASTM A153 for Hot-dip fasteners, and A653 for Hot-dip connector and sheet products. This change increases the galvanized coating requirements to a designation of G-185. Stainless steel fasteners and connections may be used in place of Hot-dip galvanized products.

4. Nails for general framing can be common, full head size 16d or larger, smooth nails. General framing includes purlins, diagonal braces, lateral braces, etc.

5. Bolts, screws, or metal plate connectors may be used instead of nails. Such substitutions shall provide a connection of equal or greater strength and durability, according to the National Forest Products Association's (NFPA) National Design Specification. Alternate connectors must be approved by the design engineer.

6. All wood in contact with the ground or manure shall be pressure treated as per American Wood Preserver's Association Standard (posts shall be treated to 0.6 #/cu.ft. and all other wood shall be treated to 0.4 #/cu.ft.)

7. All structural members which includes; All wye and knee bracing, bearing blocks, truss support blocks, and girders/headers; (excluding microllam girders/headers) shall be SouthernYellow Pine or Douglas Fir-Larch No. 2 Grade (Surface dry, used at 19% maximum moisture content).
   All secondary members such as permanent or continuous bracing shall be (SYP) Southern Pine No. 3, (SPF) Spruce-Pine-Fir No. 2 or better.
   Purlins shall be SYP No. 2, SPF No. 2, or better if spaced at 2' centers
   Purlins shall be SYP No. 3 or better if spaced at 1.5' centers

8. All posts are to be fully pressure treated."
   Posts shall be 4 PLY 2"x8" GLU-LAM
   HAVING THE FOLLOWING MIN. PROPERTIES:
   Bending Fb = 2350 psi
   Shear Fc = 2150 psi
   E = 1700000 psi

9. Galvanized angle iron (1/4" thick x 3" wide both ways) can be installed on the corners of the posts at entrance locations. Other means of post protection may be used if approved by the design engineer.

10. Girders (depending on location)
    Girders are to be (2) 1 3/4" X 9 1/4" 2.0E LVL'S
    having the following min. properties:
    1 3/4" x 9 1/4" 2.0E LVL'S
    Bending Fb = 2900 psi
    Moment = 6271 ft-lbs
    Shear Fv = 3453lbs (320psi)
    E = 2,000,000 psi

    HEADER
    (1) 7" X 11 1/4" 2.0E PSL
    having the following min. properties:
    Bending Fb = 2900 psi
    Moment = 35,940 ft-lbs
    Shear Fv = 15.225lbs (320psi)
    E = 2,000,000 psi

11. Knee and Wye bracing are required for the posts and girders as shown.
    Wye bracing shall be installed AFTER all roof framing is complete.
    No Wye bracing shall be installed on the "inside" of the entrance locations.

12. Permanent continuous lateral bracing is required, according to the truss MFG drawings. Continuous lateral bracing must be installed with staggered side by side overlap connections (no butt to butt connections).
    The ends of the braces must extend fully past the truss and allow a 2-nail connection without using toenails.

13. Permanent diagonal bracing is required at each end of the building and at intervals not to exceed what is shown in the drawings. All bracing shall be installed as Per the Truss Plate Institute BCSI-B3 and the detailed drawing.

14. Roof fasteners shall be a combination of zinc coated steel and neoprene washer. Double stitch the seams of the roof edges. Typical aluminum roof shall have fasteners on a 9" spacing on the purlins 24" on center. Aluminum roofing shall have nominal thickness of 0.018 inches and coated steel of a 29 gauge minimum or better. Resolite panels may also be used as the roofing material. Fasteners for the Resolite panels shall be as recommended by the manufacturer.
    Painted steel, galvanized, or painted galvanized steel roofing to be discussed w/ landowner prior to bid solicitation. Galvalume roofing is not permitted for use.

15. End trusses shall be faced with corrugated 29 gage galvanized steel roofing, an equivalent or better. Resolite panels may also be used.
    The grade of Resolite panels shall be approved by the design engineer before ordering.

16. Ventilation shall be provide by an overshot style ridge.
    Ventilation shall be provide to offer at least 2" of opening per 10' of building width.

17. The roof area was designed to carry a combined loading of 40 psf. (DEAD + LIVE LOAD) on the entire roof surface and a uniform uplift of 14.5 psf under the entire roof.
    "LIVE LOAD" is the ground snow load after reduction factors have been applied + wind load.
    This roof is designed for (2) OPTIONAL enclosed side. All other sides shall remain "open"; major structural changes may be needed if any of "open" sides are enclosed.
    Consult with the design engineer if curtains or other means of siding is being considered.

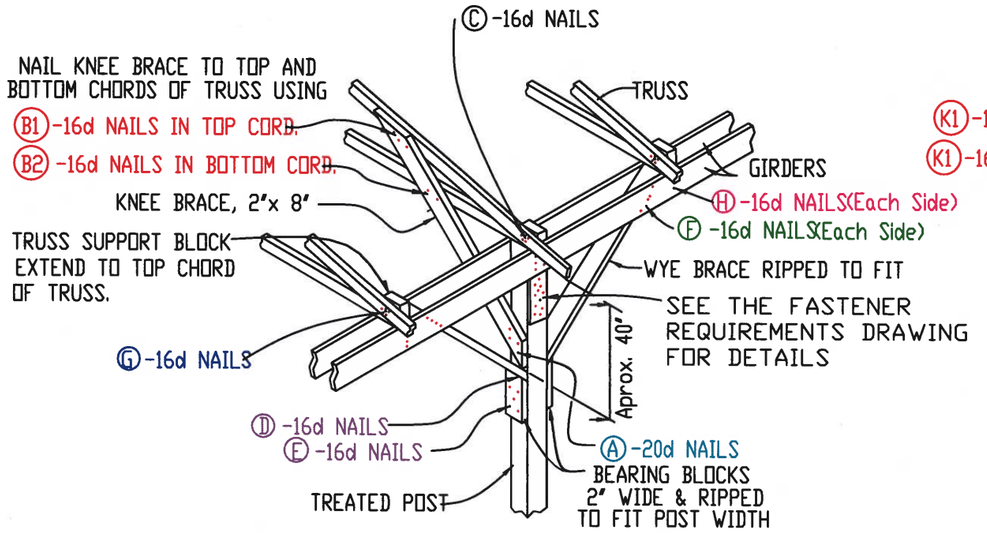
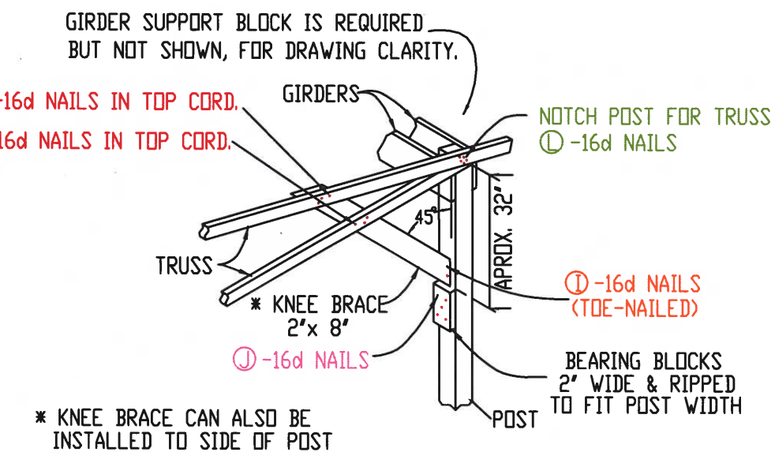
WYE AND KNEE BRACE DETAILS



BRACING DETAIL



BRACING AT END OF BUILDING

BRACING DETAILS

1. Posts shall be notched to accomodate trusses. The notch shall be cut flush with the top of the girders, so the trusses sit on the notch and on top of both girders equally.
2. The truss support blocks, at locations between posts, can be notched sections of posts or 2x boards. Notches shall be cut, and the block positioned in the same fashion as the notches in the posts, described above.
3. The wye and knee braces shall be installed at a 45 degree angle from the treated posts. Install the wye braces after the trusses are set.
4. Drill pilot holes as needed to prevent splitting. Nails in split holes do not count towards connection.
5. Nails in contact with pressure-treated wood shall be galvanized.

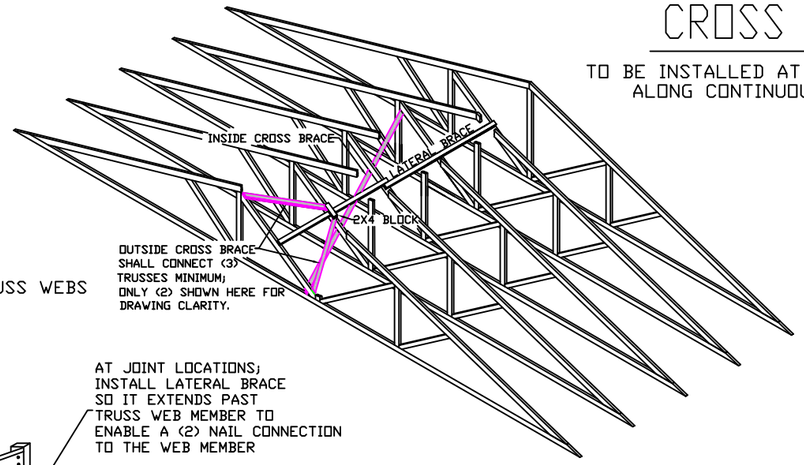
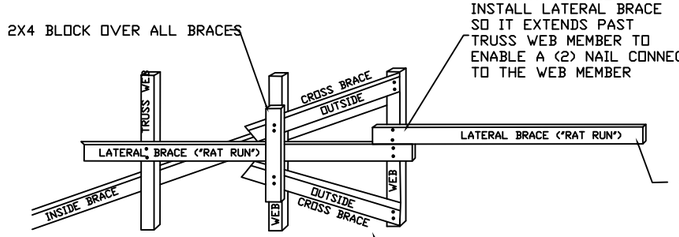
CROSS BRACING

TO BE INSTALLED AT INTERVALS NOT TO EXCEED 20'
ALONG CONTINUOUS LATERAL BRACING

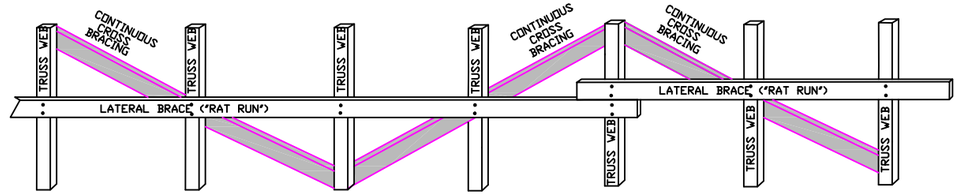


CROSS BRACING IS REQUIRED ON TRUSS WEBS THAT HAVE A CONTINUOUS LATERAL BRACE OPTION #1



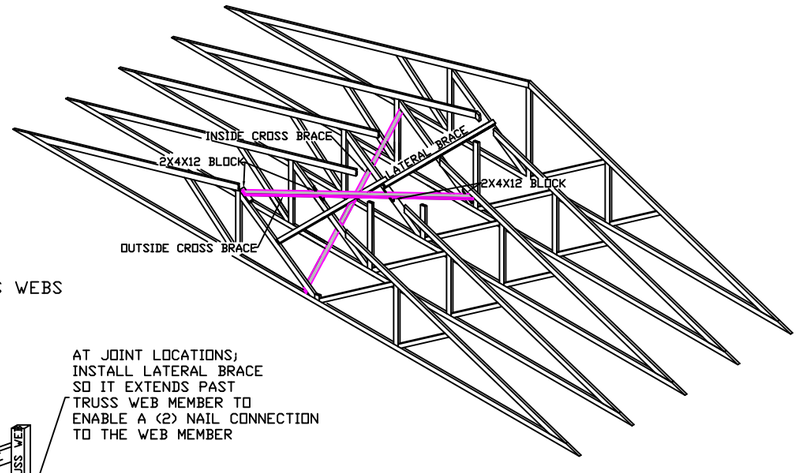
* ALL CROSS BRACES SHALL BE INSTALLED AT LESS THAN OR EQUAL TO 45 DEGREE ANGLES

CROSS BRACING IS REQUIRED ON TRUSS WEBS THAT HAVE A CONTIINUOUS LATERAL BRACE OPTION #3

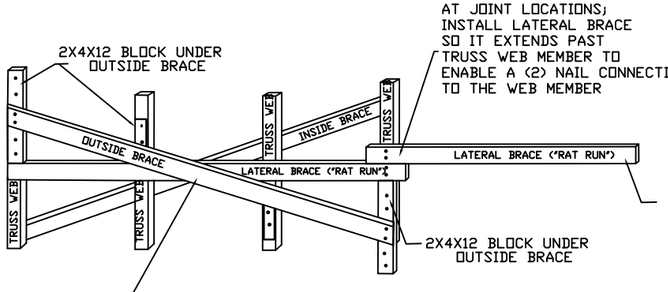


INSTALL 'CONTINUOUS' CROSS BRACING ON THE OPPOSITE SIDE OF THE TRUSS WEB MEMBER AS THE LATERAL BRACE. THE CROSS BRACING MUST RUN THE ENTIRE LENGTH OF THE BUILDING ON THOSE WEB MEMBERS WITH LATERAL BRACING SPECIFIED IN THE TRUSS DESIGN AND AT OTHER LOCATIONS DICTATED BY THE BUILDING DESIGN ENGINEER.
(2-16d NAILS @ EACH MEMBER)

* ALL CROSS BRACES SHALL BE INSTALLED AT LESS THAN OR EQUAL TO 45 DEGREE ANGLES



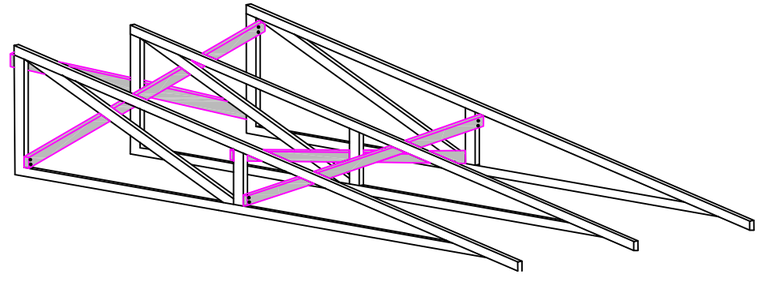
CROSS BRACING IS REQUIRED ON TRUSS WEBS THAT HAVE A CONTINUOUS LATERAL BRACE OPTION #2



* ALL CROSS BRACES SHALL BE INSTALLED AT LESS THAN OR EQUAL TO 45 DEGREE ANGLES

CROSS BRACING IS REQUIRED ON TRUSS WEBS THAT DO NOT HAVE A CONTINUOUS LATERAL BRACE; AT LOCATIONS SHOWN IN THE DRAWINGS.

OPTION #4



CROSS BRACING ON BOTH SIDES OF TRUSS WEBS AT LOCATIONS SHOWN WHERE THERE IS NOT A LATERAL BRACE ('RAT RUN') LOCATED ON A TRUSS WEB MEMBER, DICTATED BY THE BUILDING DESIGN ENGINEER.
THE CROSS BRACE SHALL CONNECT AT LEAST (3) TRUSSES,
(2-16d NAILS @ EACH MEMBER/BLOCK)

* ALL CROSS BRACES SHALL BE INSTALLED AT LESS THAN OR EQUAL TO 45 DEGREE ANGLES

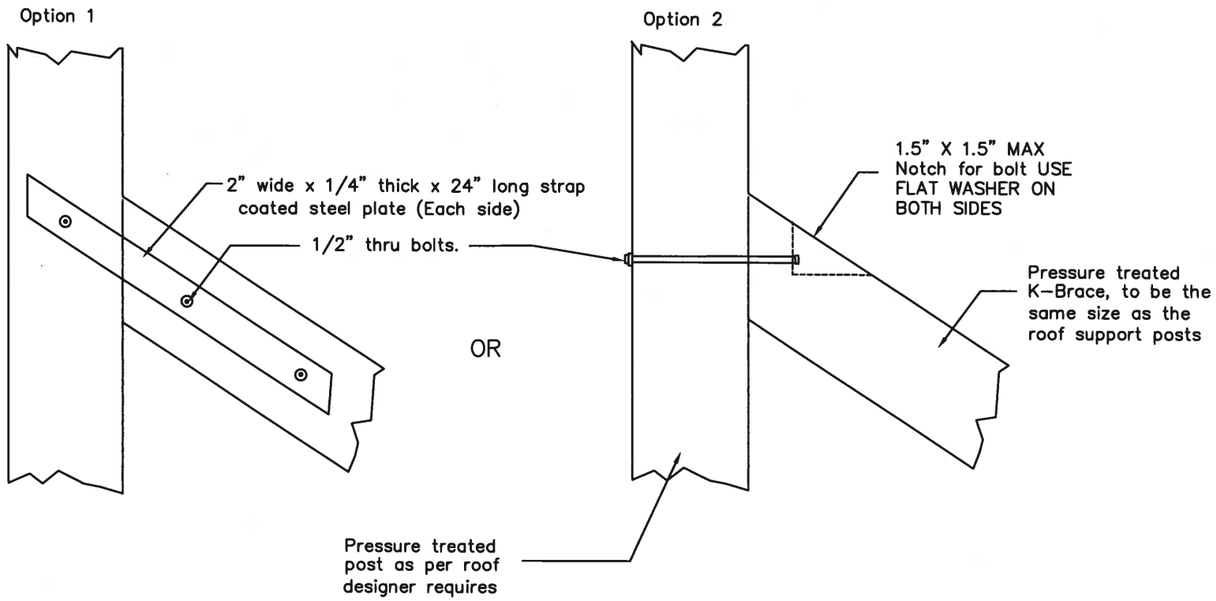
"K" BRACING DETAIL

(FOR POSTS ON TOP OF CONCRETE WALL)



NOTES:

1). "K" braceing is needed when posts are anchored to top of walls.

2). Will need a "K" brace at the corners of the building.
A "K" brace should also be considered on both sides of openings.

3). Other "K" brace configurations may be used if approved by the designer.

** IF THE ENCLOSED SIDES ARE ENCLOSED WITH STEEL PANELS THEN "K" BRACES ARE NOT REQUIRED.
IF THE ENCLOSED SIDES ARE ENCLOSED WITH CURTAINS THEN "K" BRACES ARE REQUIRED.
IF ALL SIDES ARE LEFT OPEN THEN "K" BRACES ARE REQUIRED.

K–BRACE SHALL BE THE SAME SIZE AS THE SUPPORT POSTS. ORDER ENOUGH POSTS FOR K–BRACING.
